

# Clinic admin surface

Submission screenshot evidence

## 4 CAPTURED STATES

### One coherent synthetic journey

All screens use the fictional Jamie Tan profile and ClinicPass demonstration data. The document journey used the configured live AGNES 2.0 Flash endpoint. No real patient, Singpass, insurer, or government service was contacted.

#### Safety boundary

Administrative readiness only. Clinic staff make the decision; identity, e-card, and originals are checked in person.

# Exception-first review queue

Clinic assistants see a prioritized list of synthetic cases with visit purpose, readiness state, and timestamps.
