

Patient surface

Submission screenshot evidence

3 CAPTURED STATES

One coherent synthetic journey

All screens use the fictional Jamie Tan profile and ClinicPass demonstration data. The document journey used the configured live AGNES 2.0 Flash endpoint. No real patient, Singpass, insurer, or government service was contacted.

Safety boundary

Administrative readiness only. Clinic staff make the decision; identity, e-card, and originals are checked in person.

Simulated Singpass/MyInfo handoff

The entry point is explicitly marked as a simulation, uses a fictional Jamie Tan profile, and preserves in-person identity and e-card checks.

Identity Visit Documents Review

STEP 1 OF 4 · DEMO IDENTITY

Let's get your details

Use the simulated Singpass and MyInfo handoff for a quick demo, or enter fictional details manually.

SIMULATION ONLY

This is not connected to Singpass and does not verify anyone's identity.

 **Continue with Singpass demo**
Uses a synthetic Jamie Tan profile

Enter details manually

Your original identity document and any required e-card will still be checked by clinic staff in person.

Live AGNES patient-safe summary

A watermarked company medical chit completed live image parsing. The patient sees document type, issuer, validity, and preparation notes without a coverage claim.
